

Area 15

Oldest component in Area 15 of the Gault site is more than 15,000 years old

Research

The GSAR is interested in the broad questions regarding the earliest people from the Western Hemisphere and their beginnings such as:

When did people get here?

How long ago?

Where did they come from?

In order to accomplish this we engage diverse and numerous individuals with different skills, ideas and point of views. We work with:

- numerous outside researchers
- universities
- archaeological organizations
- and other groups that share our vision.

New programs, research and approaches stem from this cooperation. Expeditions have looked at sites in Texas, Central America and underwater on the Continental shelf.

Education & Outreach

Educating the public and archaeology students, and fostering the growth of innovative young researchers are major objectives of the GSAR. The education outreach provided includes:

- speaking engagements, tours and developing materials for the classroom
- teachers workshops to help educators incorporate archaeology into their lessons
- professional conferences, workshops and museum exhibits
- access to students, interns, volunteers and researchers to our offices and laboratory
- the development of fellowships and short, intensive field and analytical study programs

We publicize our research through many different outlets. To our colleagues through journals and presentations, and to the public and students through the media, teaching and tours.

Become a Member

Membership in the GSAR is an excellent way to support our research and educational goals. We inform members of GSAR activities and opportunities to get further involved. We cannot exist without your support.

As a member you may join us in the field to see how archaeology is done. Members receive a quarterly GSAR newsletter, discounts on "Gault Gear" and invitations to periodic special events. This is a very exciting time in Paleoindian archaeology, and new discoveries happen all the time. Join us!

Membership

Students.....	\$10
Adult Individuals.....	\$45
Dual/family.....	\$65
Org./Institutions.....	\$500
Corporations.....	\$10,000
Life.....	\$1,000

The GSAR

Who were the earliest people in the Western Hemisphere, and where did they come from? These are the kinds of questions the GSAR answers. The GSAR is a 501(c)3 nonprofit with a mission to promote research and education about the earliest people of the Americas.

The Gault Site, home campus of the GSAR, is on the largest identified Clovis site with deposits preceding Clovis as well. First identified in 1929, it was thought to have been lost to looting and collecting over the years. An exploratory excavation in 1991 determined there were extensive paleoindian deposits. Since then, more than two million artifacts have been recovered from approximately 3 percent of the site. Some of the unique finds include a stone floor and engraved stones, among the first known architectures and art in the Americas.
